EASYCORE

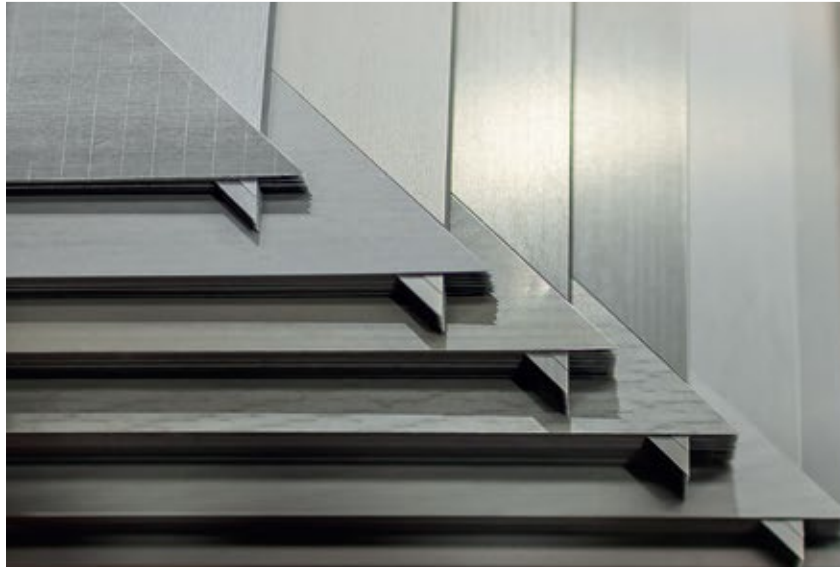

EasyCore, being part of a multinational group, aims to offer all his clients and business partners a continuous support and the best results in each stage of the production process of high quality magnetic cores for a wide range of transformers.

Located in Germany and Turkey, EasyCore's excellence philosophy is based on providing the best solution starting from the procurement of the high quality electrical steel till the delivery of the finished core.

PRODUCTION

EasyCore has a large network of customers from all over the world with its capacity to produce various types of transformer cores.

With state-of-art slitting lines, cutting lines, stacking tables, testing laboratory and a large stock of different grades of high quality electrical steel, EasyCore has the ability to produce distribution transformer cores from 25 KVA to 6 MVA and power transformer cores from 6 MVA and above.

DISTRIBUTION TRANSFORMER CORES

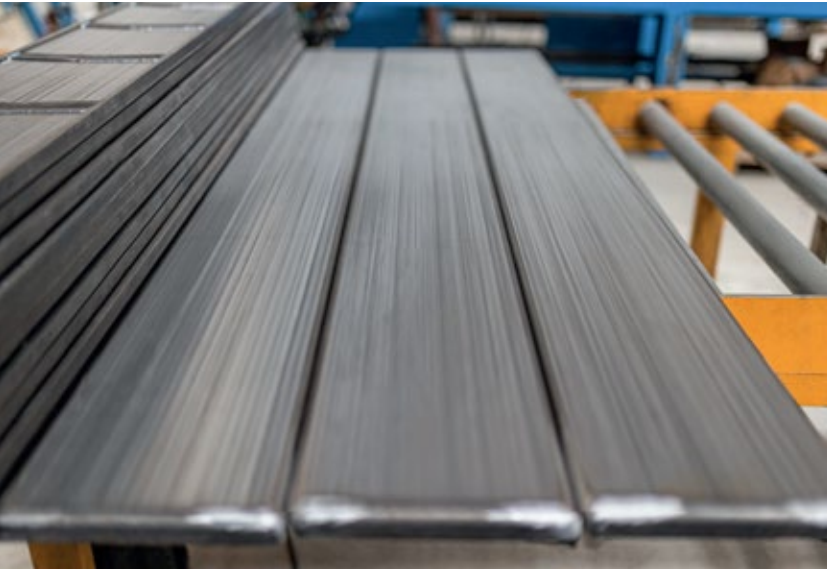

EasyCore produces tailor-made distribution transformer cores in different sizes of machine lines to fulfill the custom needs of each customer within its worldwide network.

Technical drawings received from the clients are examined and analyzed by an engineer team and a continuous communication with the client starts from the first order till the end of the production process.

POWER TRANSFORMER CORES

EasyCore has the ability to manufacture power transformer cores from different sizes and designs. All related parts of the cores are produced according to the need and request of its clients. Having received many orders from different parts of the world, EasyCore team aims to keep on increasing capacity consistently.

MAGNETIC FLUX COLLECTORS

Known also as shieldings, the magnetic flux collectors are parts of the power transformers designed to lower power losses.

EasyCore uses high quality grain oriented electrical steel to produce shieldings from 8 mm width and above for power transformers to ensure the best efficiency.

Locations: Turkey, Germany
